## Retrofit Facilities with IP-based Alerting

Audible and visual devices for in-building notifications

 Audible-Visual  Activation Capability

**Alert Beacon®**  (AAB-E-WT)  
 ADA-compliant wall-mounted, audible-visual notification device that attracts attention with sounders, flashing strobes, and a large text display.

**IP Speaker** (AUD-IPS)  
 Standalone, highly intelligible indoor audio that can integrate with existing audible systems. Fully supervised, “plug and play” option for affordable audible coverage.

**Alertus LED Marquee** (AVN-LEDM)  
 Reach large public indoor areas with emergency notifications or general announcements in scrolling text.

**Fire Alarm Control Panel (FACP) Interface** (ECS-FACP2)  
 The FACP integration allows fire panel events to activate the Alertus System and broadcast messages over various communication paths.

**IP Text-to-Speech Interface**  
 Breakthrough text-to-speech (TTS) technology is embedded in a compact PCB module to fit inside most fire alarm control panels, public address systems, outdoor giant voice speaker systems, or standalone indoor/outdoor speaker enclosures.

**Two-way Radio Integration** (ECS-R)  
 Extends alerting reach and instantly sends emergency notifications, including alert tones and clear text-to-speech messages, to two-way radio users.

# Facility-based SOLUTIONS

### Access Control

Integrating Access Control with Alertus enables security teams to gain helpful insight into when and where people have entered the building, enabling location-specific notifications to everyone on-site in an emergency.

### Intelligent Systems Integration

Intelligent Buildings link infrastructure and IT to streamline and monitor all areas of the building's functions, from HVAC systems to access control.

### Strobes & Sounders (AVN-STK-AM)

Alertus' visual signaling offers multicolored strobe and sounder options to deliver various types of alerts from a single device.

### Indoor/Outdoor Self-Amplified Horns (AUD-IPS-ODH-05w)

Features a built-in amplifier, volume control, and text-to-speech technology to provide crystal-clear audible notification throughout indoor and outdoor areas.

### Omni-Directional Indoor Speaker (HPSA-OMNI-300W)

Enhances communication throughout widespread indoor spaces with distinctive tones and highly intelligible spoken-voice announcements.

### Alertus ThreatWatcher™

Monitors premium meteorology data feeds to broadcast real-time weather updates and up-to-the-minute, site-specific warnings automatically across the Alertus System.

### Lightning Detection

Monitors premium meteorology data feeds to launch actions immediately after receiving lightning alerts based on custom geographic locations.

# Enterprise & Network-based SOLUTIONS

## Leverage Existing IP Assets

Desktop alerting and IP phones for digital PA

Audible-Visual

Activation Capability

### Alert Desktop™ Notification (ADN-X)

Enterprise software solution for overriding computer displays with critical alert messages. Lock screen override, Wake-on-LAN, text-to-speech, and audio files are supported.

### Alert Desktop™ for Chrome (ADN-CHROME)

Browser-based enterprise software overrides desktops with critical alert messages on computers running a Chrome browser.

### Business Communication Platform Integrations (Chat Integration) (INT-CHAT)

The Alertus System integrates with existing communication platforms such as Microsoft Teams, Slack, and Google Chat to reach individuals wherever they have the program installed, including mobile devices, laptops, and desktops.

### VoIP Phone Notification (VOIP-C)

Utilize existing IP infrastructure to activate audible-visual notifications on all or select VoIP phones. Most Cisco models and Avaya Aura and Avaya Office are supported.

### SIP Annunciator (VOIP-SIP-ANN)

Alertus SIP phone notification seamlessly integrates with supported SIP phone systems and Alertus Server software to control and activate mass alerts.

### Analog Phone Interface (VOIP-ANALOG)

The Alertus IP Analog Phone Interface allows organizations to send critical notifications to phone page groups and existing paging systems by connecting through legacy analog phone ports.

# Enterprise & Network-based SOLUTIONS

**Digital Signage Override**  (ECS-DS)  
Transforms digital signage devices into intelligent alerting appliances.

**Alertus Alert Display**   
Deploys dynamic emergency notifications or general announcements on crisp displays across public indoor areas of all sizes.

**Alertus Desktop Activator**  (ADN-A)  
Expedites the alerting process through one-step activation, which triggers pre-set alerts from the Alertus Server and delivers them as desktop notifications.

**USB Panic Button**  (ALR-USB)  
A discreet, under-the-counter device with flexible one-touch incident reporting or system activation.

**Rapid Response Console (RRC)**   (ALR-RRC-WM)  
A sleek, wall-mounted tablet allows multiple authorized users to activate the Alertus System through a single point and restricts unauthorized users — avoiding false activations and tampering.

**WiFi Panic Button**   (ALR-RRC-WM)  
Alertus' discreet, pocket-sized WiFi Panic Button empowers staff to get help when and where they need it. Enabled to send location, responders can ensure assistance gets there faster.

**USB Multi Panic Button**   (ALR-USB-4)  
Trigger emergency notifications through a slim, mountable module with multiple customizable incident buttons.

# Outdoor Area Solutions

## SOLUTIONS

**Deliver Long Range, Clear Voice Alerts**  
 Unparalleled intelligibility for large, outdoor areas

Audible-Visual

Activation Capability

**High Power Speaker Array (HPSA)** *(HPSA-1800w)*  
 Wide area warning system with audible siren tones and TTS technology to deliver enunciated voice messages to large, outdoor environments.

**HPS 100** *(HPSA-100w)*  
 A standalone, compact, self-amplified electronic speaker that delivers clear voice messaging and siren tones for emergency notifications. Ideal for outdoor and expansive indoor areas.

**Mobile High Power Speaker Array (MHPSA)** *(HPSA-OUTD-MOBILE)*  
 On a mobile trailer, Alertus' MHPSA provides both siren tones and crystal-clear voice messaging using TTS technology, pre-recorded messages, and live voice paging.

**Indoor/Outdoor Self-Amplified Horns** *(AUD-IPS-ODH-05w)*  
 Features a built-in amplifier, volume control, and text-to-speech technology to provide crystal-clear audible notification throughout indoor and outdoor areas.

# Mobile & Personal Notification SOLUTIONS

## Simplify Personal Notification

Location-aware alerting with personnel accountability

 Audible-Visual

 Activation Capability

**Activator App**  (APP-MOBILE-ACTIVATE)  
Authorized dispatchers can quickly activate emergency notifications on the go via iOS or Android tablets or smartphones.

**Cell Broadcasting**   
Authorized organizations can instantly send mobile alert notifications within specific target locations, removing the need for recipients to opt-in or subscribe.

**AlertAware®**  (AVN-ALERT-DISPLAY)  
Improve emergency response time by sending crisis communication across multiple mass notification endpoints.

**Distributed Recipient Mass Notification System (DRMNS) Integration**   
Alertus offers two-way or one-way activation methods with most DRMNS providers. Building redundancy into a mass notification approach ensures everyone receives important notifications - even when the Internet is down.
